In gardening the smallest investment that is made is the original cost of the material for planting. Most of the seeds, bulbs and other materials you buy are in the category of "blind" items; that is, items on which it is impossible to evaluate quality except by their performance. For this reason, and to guard against disappointments, it is wise to obtain your garden materials from a firm that specializes in that field, and from one whose reputation for quality seeds and bulbs is well known.

We of Max Schling Seedsmen, Inc., have always prided ourselves on the uniformly high quality of the seeds, bulbs and plants which we offer. The name "Max Schling" has been and will continue to be synonymous with "the best" and is your assurance of gardening success.

Because of the high cost of processing charge accounts, please do not ask us to charge orders of less than three dollars.

When you are in New York, come in and visit with us. Not only will you find an amazing supply of garden accessories, but also a courteous and expert staff to assist you with your horticultural problems.

CONDITIONS OF SALE

While we exercise the greatest care to send out only seeds of the very highest quality and germination, there are too many elements of Nature, or neglect on the part of the planter, not within our control, which may influence the ultimate results. It is for that reason that we can give no warranty, express or implied, as to the description, quality, productiveness or any other matter of any seeds, plants, or bulbs we sell; and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are to be returned at once.

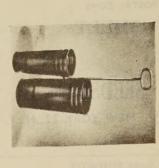

TERMS OF SALE

All flower seeds and vegetable seeds are shipped postage paid in the continental United States. Fertilizers and plants are not postpaid. When ordering these, please add 10% of the value of the merchandise to cover postage and handling.

NON-WARRANTY ON LIVE OR DORMANT PLANTS

Due to various soil and climatic conditions we, under no circumstances, will guarantee the results of any live or dormant plants. We further give no warranty as to the condition of the plants upon arrival. In the event of a destroyed shipment or any other complaints relative to plant shipments, complaints must be registered within five days after arrival. We will not accept any other complaints.

Annual Snapdragons

Tips On Snapdragon Culture

Antirrhinum (Snapdragon) seed should be started in flats early in the spring. Care should be taken not to plant the seed too deeply, or to over-water. When plants are large enough to handle, they can be pricked off into 2½-inch pots and hardened in the cold frame for later transplanting.

Seeds may also be sown directly in the open soil and then thinned out, leaving seedlings about a foot apart.

Snapdragons are a hardy annual and excellent results may be obtained by fall sowing.

Annual Wild Garden Mixture

It is our wish that we would have sufficient space to list all of the testimonials that we have received in praise of this marvelous seed value. We have received reports from all sections of the country extolling the beauty and practical results obtained from sowing this mixture. Carefully blended to strike a perfect balance between the showy bright annuals and those of more subdued tendencies, the result provides a bold effect where required and a vista of real beauty covering large areas where it would be impossible to intensely cultivate a garden. Left to themselves, the vigorous hardy annuals in this mixture self-sow and it can be safely said that a wild garden produced from this seed will be more or less permanent. Cultural Hints for Sweet Peas

Sweet Peas require cool weather for satisfactory results. For this reason, very early sowing is to be recommended. A rich, well drained soil is preferred, and full sun is necessary. Fall planting produces good results.

The Cuthbertson strain of Sweet Peas is resistant to heat, and is, therefore, recommended in hot locations where other varieties may be disappointing.

SEEDS of HARDY FLOWERS AND BIENNIALS

HOW TO GROW THEM. Hardy plants (perennials) bloom the second year from seed and are permanent thereafter. Some of them may bloom the first year if the seed is sown very early. Among the perennials we find some of the most beautiful flowers for cutting and many of the old-fashioned sorts dear to our childhood memories. A hardy border properly planned and planted is a source of joy from early spring to late autumn; during that period it will be resplendent with color and yield an abundance of bloom for indoor decoration. The plants need little attention other than to be kept free from weeds and given an occasional top-dressing of plant-food.

WHEN TO SOW. Seed may be sown in hotbed in February or March, or out-of-doors from the first days of May to mid-August. It is well to sow as early as possible, thus permitting the plants to become strong and well established before winter.

WHERE TO SOW. For most perennials a cold frame is an ideal place for starting seeds, but if you do not have one, make a seed-bed of finely sifted light soil, adding and mixing thoroughly well-decayed manure, humus, or prepared plant-food. Sow the seeds in shallow drills, covering ½ inch or more, according to the size of the seed, but very fine seed should only be lightly pressed into the soil.

CARE OF SEEDS AFTER SOWING. Press down the bed with a flat board, and water gently but thoroughly with a fine spray. Do not permit the soil to become dry while the seed is in process of germination, for until the plant develops roots its life depends entirely on moisture. Nearly all failures in growing perennials may be attributed to drying in the seed-bed, which should be carefully watched and watered until the plants have made four to five leaves.

CARE OF PLANTS AFTER GERMINATION. Most seeds will germinate in from eight to fourteen days, but others may need a month or so; therefore do not become impatient. If seedlings come up very thickly, pull out some and transplant to boxes or other seed-beds; later they may be set out in the permanent place. Transplanting should be done before October 1st, to permit the plants to become established before frost. Mulching the plants with leaves, salt hay, or peat moss about the middle of December is a distinct advantage. The leaves and hay must be removed in spring, but the peat moss may remain. Full cultural directions will be found on each packet of Schling's seeds.

Everybody wants perennials in generous measure, to secure effects in color and charm. If you delay and finally buy plants, an attractive perennial border may require several hundred dollars' worth of plants.

Exactly the same results can be secured with \$10 to \$15 worth of seeds! And aside from the money-saving, you have the fascination of growing your own plants, nursing them from the beginning, and loving them all the more. Sow your seeds now, and the plants will bloom next year.

NOTES ON GLADIOLUS CULTURE

Gladiolus bulbs can be planted in the latitude of New York City from April 15th to July 10th. If successive flowering is desired, recommend plantings at two-week intervals.

Gladiolus do best in a good garden soil with a sunny location. For largest flowers it is well to use a general purpose fertilizer before planting, and again as a side dressing when the plants are 12 to 15 inches high. Plant bulbs at a depth of four to six inches.

For exhibition spikes it is necessary to provide water during periods of drought, soaking the ground to a depth of 4 to 5 inches once a week.

When cutting Gladiolus spikes, allow the two outside leaves to remain on the plant to provide food for next year's bulbs.

Gladiolus have only one serious pest, thrips. Bulbs, when you get them from us, have all been dusted with DDT, and are free of thrips. To prevent injury from this insect, we recommend spraying or dusting with a garden preparation containing at least 10% DDT. This should be done every week to 10 days.

Max Schling's HARDY GARDEN LILIES

for Spring Planting

While fall planting is usually considered best for hardy Lilies, spring planting is nevertheless a time-proven method. Many Lilies do not mature sufficiently in time for fall planting. These are leisurely cured and stored at a temperature of 36 degrees. When removed from storage they are in perfect condition and are ready to start IMMEDIATE growth when planted.

A Proven Success! A SUCCESSION OF SWEET CORN

This marvelous collection has met with spontaneous approval. The results obtained since its introduction are a source of great satisfaction. Many years ago we introduced our famous Long Season Pea Collection. Now, we take pleasure in presenting our Long Season Hybrid Sweet Corn Collection. As a result of experiments conducted by the Connecticut Experiment Station, which is the leading authority on Hybrid Sweet Corn in the United States, we are able to offer a collection of five varieties of Hybrid Sweet Corn which will bear in constant succession for a period exceeding four weeks with no two varieties ripening together. In order to continue the season after the collection has ripened we advise successive plantings of Golden Cross Bantam which is the latest variety in the collection and which can be planted with safety up until July 1st, or the two additional varieties listed below.

Each one of these varieties has been chosen for its wilt-resistant qualities, heavy-bearing propensities and fine flavor. For this reason we can offer this collection with absolute assurance in the fact that these varieties can be classified as wilt-resistant—heavy bearing—excellent flavor.

Spancross 4.13. Extra early.
Marcross 13.6. Early.
Carmelcross 39.13. Early midseason.

Whipcross (Lincoln) 39.23. Midseason. Golden Cross Bantam. Late midseason.

Method of Planting

At the time when you usually sow your early Sweet Corn, arrange to plant the entire collection together. Every two weeks thereafter plant an additional quantity of Golden Cross Bantam until the latest possible date.

Beans—Bush, Snap

Culture: Beans grow well in any good garden soil. Usually the first planting can be made the last week in April, followed by successive plantings about 2 weeks apart until August 15. Open a drill 2 inches deep and drop the Beans 1 inch apart and cover. When well up, draw the soil up against the plants and cultivate frequently. Do not cultivate them when the dew is on the plants as this frequently causes rust. One pound of seed is sufficient for 50 feet of drill.

Tendergreen. Round, dark green, stringless and tender. (50 days.)

Wade. Round, smooth pods, plants resistant to disease. (55 days.)

Lima Beans-Bush

Bush Limas are nearly 2 weeks earlier than Pole Limas. The seed is quite tender, and will rot while the ground is cold or wet, so do not plant before the ground is warm. For best results, however, the seed can be started in pots in a hotbed or in the greenhouse, and the plants set out when the weather is settled. Plant in rows 3 feet apart and from 4 to 6 inches apart in the row, always edgewise, with the eye down.

Baby Potato. Most outstanding Bush Lima to date. Exquisite flavor and prolific production. Matures in 72 days.

Fordhook. Best for the home garden, very productive and of fine flavor. Large, round and plump, of rich buttery flavor. (71 days.)

Time shown after descriptions indicates average time to maturity. In many cases, picking well before these dates will give tastier and more tender vegetables.

Beans—Pole Limas

Where poles can be secured, these Beans are more productive than the Bush varieties. Set poles 3 feet apart, enrich the soil in the hills by mixing with a liberal supply of fertilizer or well-rotted manure. Do not plant until the ground is warm. One pound will plant 50 poles.

DO YOU KNOW THIS SECRET?

Do you know how to avoid the usual disappointment of a poor Pea crop after mid-July? It is easy to get big crops of luscious juicy Peas "falling right over one another," in steady succession even up to late August—if you learn this secret:

Instead of planting at 2- to 3-week intervals, get the following picked varieties and plant all at once in early spring, the moment the ground can be worked. This will allow a good root-system to develop before hot weather comes. The varieties will bear in the order shown below (and pictured opposite), beginning about June 20 and keeping up a steady succession of big mouth-watering crops until late August.

Petit Pois. A delicate French Pea of very sweet flavor. Preferred by those who appreciate the finest things on the menu. Pkt., 35c; 1/2 lb., 75c; lb., \$1.35.

MILKY DISEASE SPORE POWDER

U. S. Department of Agriculture Formula Made Under Government License and Supervision

U. S. Department of Agriculture has finally found the specific control of Japanese Beetles, the Milky Spore Disease which remains ever present and active for all time on the ground. In fact, its effectiveness spreads by means of bird droppings, wind, etc.

Experiments proved that in less than two years the beetle population of the most highly infested areas has dropped almost 60% and in three years have be-come almost non-existent. The parasitic disease attacks the larvae in the ground and need only come in contact with the larvae to cause infection.

Non-Poisonous, Perfectly Safe to Use

Full instructions for many methods of application appear on each package. It is easiest to apply by mixing proper amounts with fertilizer and distributing it at the same time. The material never spoils. It can be kept for years and, remember, once your ground is inoculated, it remains inoculated forever.

For guaranteed beetle protection, use it yourself, induce your neighbors to use it, and influence your local civic organization to use it.

Price: \$3.15 per 1/2 lb.; postpaid anywhere in U. S. A.

No discount for quantity. One pound sufficient for 2000 square ft.

Total of Order

In gardening the smallest investment that is made is the original cost of the material for planting. Most of the seeds, bulbs and other materials you buy are in the category of "blind" items; that is, items on which it is impossible to evaluate quality except by their performance. For this reason, and to guard against disappointments, it is wise to obtain your garden materials from a firm that specializes in that field, and from one whose reputation for quality seeds and bulbs is well known.

We of Max Schling Seedsmen, Inc., have always prided ourselves on the uniformly high quality of the seeds, bulbs and plants which we offer. The name "Max Schling" has been and will continue to be synonymous with "the best" and is your assurance of gardening success.

Because of the high cost of processing charge accounts, please do not ask us to charge orders of less than three dollars.

When you are in New York, come in and visit with us. Not only will you find an amazing supply of garden accessories, but also a courteous and expert staff to assist you with your horticultural problems.

CONDITIONS OF SALE

While we exercise the greatest care to send out only seeds of the very highest quality and germination, there are too many elements of Nature, or neglect on the part of the planter, not within our control, which may influence the ultimate results. It is for that reason that we can give no warranty, express or implied, as to the description, quality, productiveness or any other matter of any seeds, plants, or bulbs we sell; and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are to be returned at once.

TERMS OF SALE

All flower seeds and vegetable seeds are shipped postage paid in the continental United States. Fertilizers and plants are not postpaid. When ordering these, please add 10% of the value of the merchandise to cover postage and handling.

NON-WARRANTY ON LIVE OR DORMANT PLANTS

Due to various soil and climatic conditions we, under no circumstances, will guarantee the results of any live or dormant plants. We further give no warranty as to the condition of the plants upon arrival. In the event of a destroyed shipment or any other complaint relative to plant shipments, complaints must be registered within five days after arrival. We will not accept any other complaints.
